- **Artefact_01_Test_Create_Volunteer_Account**

For this artefact, I was responsible for creating the acceptance tests for the Create Volunteer Account story. I did so with 3 different test cases:

1. Try to proceed without informing all the required inputs. I assert it by checking that it still on the sign up page, even after clicking in the submit button. This is the expected behavior.
2. Try to proceed informing wrong inputs format: email, password (less than 6 characters/ passwords don't match), and unit number/postcode/phone number (number only). I assert it by checking that it still on the sign up page, even after clicking in the submit button. This is the expected behavior.
3. Informing all inputs properly and proceeding to sign in page to ensure that the account was successfully created.

- **Artefact_02_Test_Manage_Volunteer_Account**

For this artefact, I was responsible for creating the acceptance tests for the Manage Volunteer Account story, which includes: view account details, edit details, change password, and delete account. I did so with 4 different test cases:

1. Access the volunteer account and assert that all inputs match the one informed in the Sign Up page.
2. Access the volunteer account, edit inputs, than assert that they were changed in the view page, after edit again to previous values.
3. Access volunteer change password page, set a new password. Sign out and Sign in using the new password, change it back to previous password. These steps ensure that the new password is stored, and the user can access his account with it.
4. Access volunteer delete account page, confirm the action, than try to sign in using the email and password deleted after, assert if the system do not allow the function and prompt an error message.

- **Artefact_03_Test_Service_Provider_Feedback**

For this artefact, I did manually tests, which assert that the service provider feedback was correctly submitted and volunteers and admin can view the average rating. By the end of this document, you can find the test evidences:

- **Artefact_04_Add_Request_Quotes**

For this artefact, I implemented the add/remove quotes to a request, submit quotes to approval and show quotes for both volunteer and client. The add/remove quotes form is presented to the volunteer after he start working on a request.

Files with code:

1. workOnRequest.php
2. processViewQuotes.php
3. processQuote.php
4. viewRequest.php

- **Artefact 05 Display Request Status**

For this artefact, I created images and implemented a code, which shows the image to represent the current request status. The images were made using photoshop, and the code that displays them was placed in the following files:

1. `workOnRequest.php`
2. `viewRequest.php`

VIEW SERVICE PROVIDER FEEDBACK TEST EVIDENCE

Test evidence, which assert that the service provider feedback was correctly submitted and volunteers and admin can view the average rating.
